

# How Cloud-Based AI/ML is Transforming the Aerospace Industry

Tim Sills

Senior Solutions Architect  
Aerospace & Satellite Solutions  
Amazon Web Services

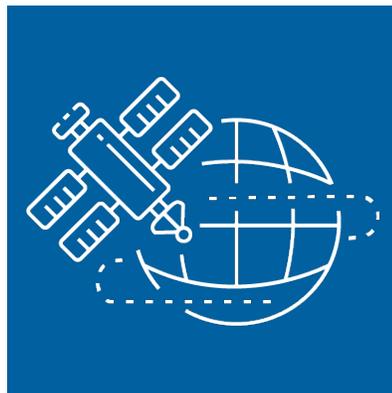

# Customer challenges

## Satellite capacity forecasting

Maximizing fleet value while meeting customer demand

## Advanced image processing

Automating management of large volumes of data

## Data process & analytics

Fusing data sources to derive meaningful insights

# The cloud is enabling space industry success

**Driving down the cost of innovation**

**Only pay for what you use**

**Managing and transforming data on earth and in space**

**Low-latency access to global cloud infrastructure**

**Automating and Optimizing Space Systems**

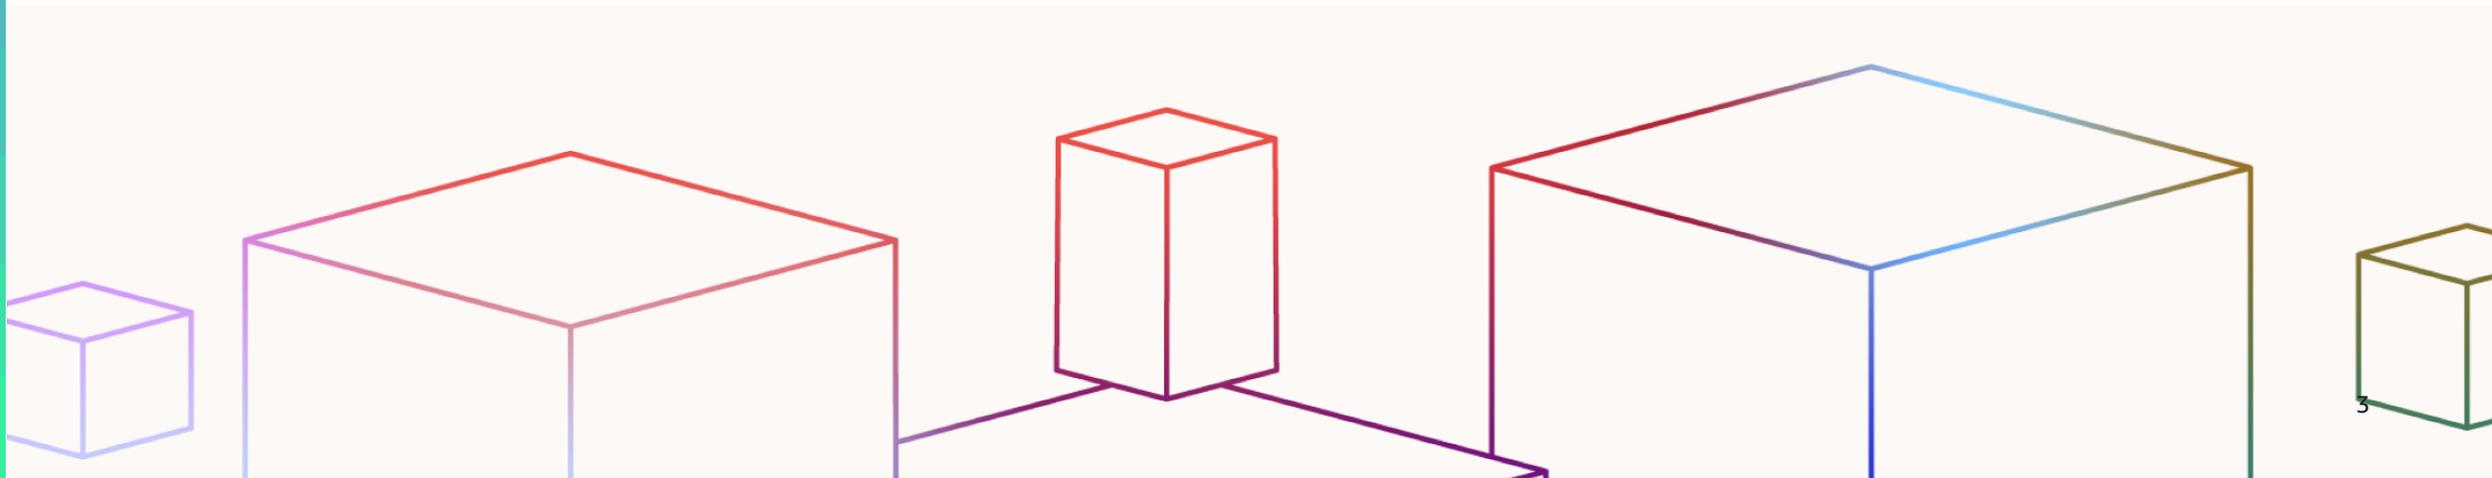

**Apply artificial intelligence (AI) and machine learning (ML)**

**Providing modernized infrastructure and process**

**Focus on mission**

**Faster Time to Insights and More Value for Data**

**Easy access to high performance compute**

# Satellite capacity forecasting – the challenges

- Manually intense process for monitoring & control
- Need to forecast and allocate to highest areas of demand
- Maximize fleet value
- Dynamically managing satellite constellation at scale

# Satellite capacity forecasting – the solutions

Operational efficiency gains for spacecraft, networking, and processing

- Use natural language prompting (NLP) for tasking orders
- Leverage Amazon SageMaker Machine Learning models to dynamically forecast demand
- Real-time optimization, scalability, and prioritization based on events

# Advanced image processing – the challenges

- Managing large volumes of data
- Data quality and consistency
- Availability of compute resources
- Optimizing collection and downlink to reduce turnaround

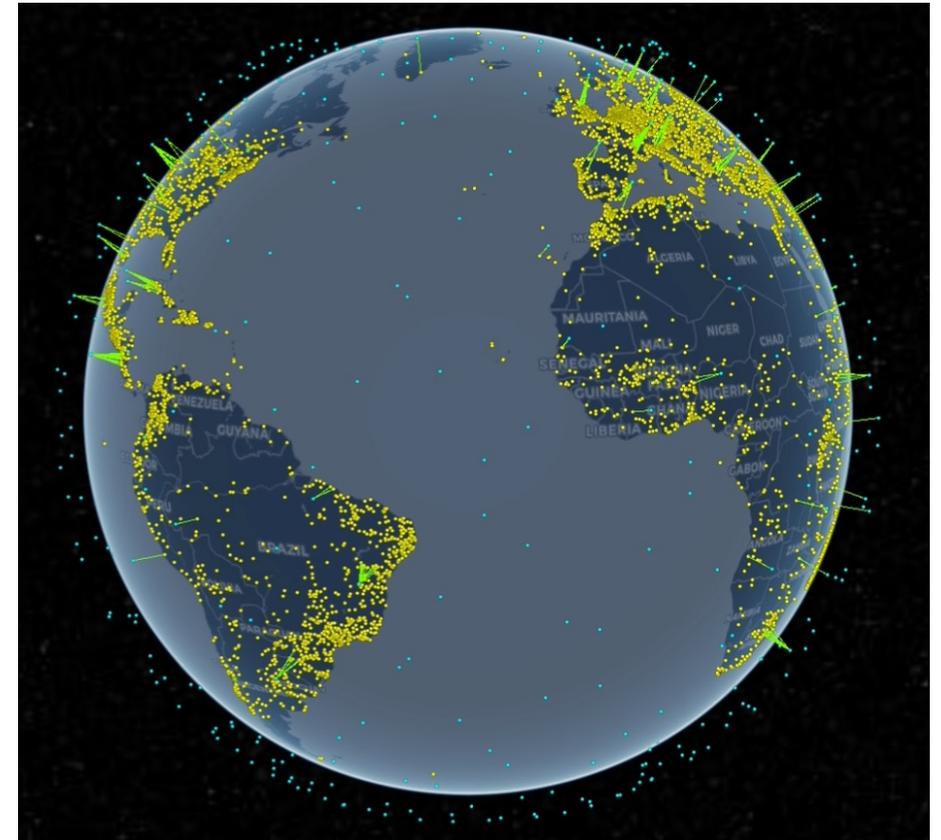

# Advanced image processing – the solution

Amazon SageMaker reduces cost and time to output

- Cost effective, scalable storage & compute in the cloud
- Machine learning models quickly process/filter images
- Deep learning models for object identification
- Generation of synthetic data for model training
- Data pipeline automation

# Data processing & analytics – the challenges

- Lack integration with automated analytics & tasking engines
- Data is siloed and inconsistent format
- Incomplete picture of ground conditions
- Significant output delays due to manual intervention

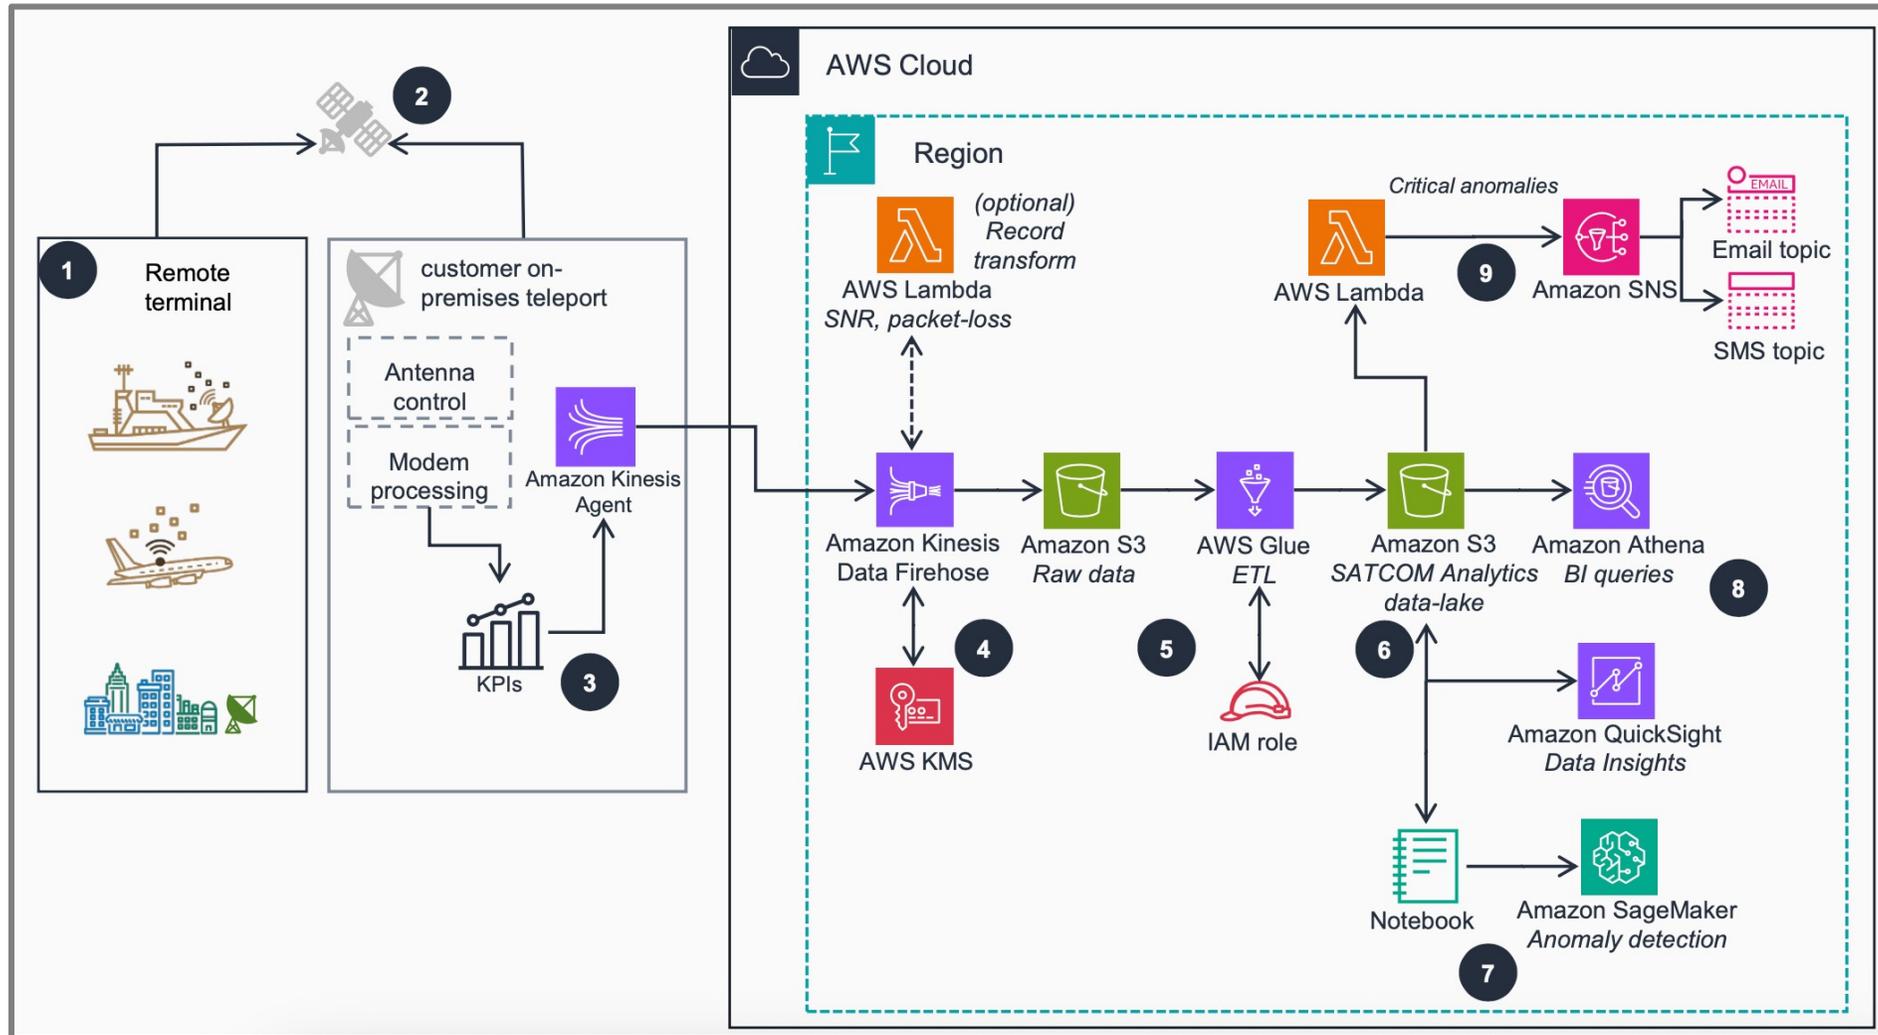

# Data processing & analytics – the solution

Amazon Bedrock helps delivers insights in hours and not days

- Use natural language prompting for requests
- AI agents orchestrate activities:
  - Contact scheduling
  - Collection of data across multiple resources
  - Fusing of data to derive insights
  - Report generation

# Satellite Communications analytics pipelines on AWS

# Key takeaways

## Our GenAI Value Proposition

20 years of AI / ML experience

Democratization: Flexibility & Choice of FMs

Secure customization

Broad integration to AWS services

The most cost-effective infrastructure

Rapidly deploy GenAI-powered applications

# How to engage us

## **DISCOVERY**

Let's work backwards

## **DEVELOP & PILOT**

Proof of concept

## **PARTNERSHIP**

Solutions and go to market

# Thank you!

**Tim Sills**
